Profile Summary

- AI Engineer (Fresher) and final-year B.Tech student specializing in Artificial Intelligence and Data Science.
- Strong hands-on experience in Generative AI and Agentic AI, building LLM-driven and multi-agent systems.
- Proficient in Python, SQL, TensorFlow, LangChain, Hugging Face, vector databases, and end-to-end AI deployment with MLOps practices (MLflow, DVC, DagsHub).
- Strong problem-solving foundation validated by a LeetCode 50+ Badge.
- Freelance Generative AI Engineer, startup founder, AI instructor, and hackathon winner with real-world project exposure.

Skills

- **Programming:** Python, SQL.
- **Problem Solving:** LeetCode (50+ Badge), Data Structures & Algorithms.
- **AI & ML:** Machine Learning, Deep Learning, Generative AI, Agentic AI, NLP, Computer Vision, Prompt Engineering, RAG.
- **Frameworks & Libraries:** TensorFlow, Scikit-learn, Hugging Face, LangChain, LangGraph, CrewAI, AGNO, LLaMA, OpenCV.
- **LLMs & Models:** Open-source LLMs, Groq-based models, LLaMA models, Embedding models.
- **Databases:** MySQL, Vector Databases, MongoDB.
- **Deployment & Tools:** FastAPI, Flask, Gradio, Streamlit, Git, Docker, AWS, CI/CD pipelines.
- **MLOps & Experiment Tracking:** MLflow, DVC (Data Version Control), DagsHub, Model Versioning, CI/CD Pipelines.

Education

Chettinad College of Engineering and Technology, Karur Sep 2023 – May 2027
B.Tech in Artificial Intelligence & Data Science — CGPA: 8.23

Sri Meenakshi Matric Higher Secondary School Jun 2022 – Mar 2023
Higher Secondary Certificate (Computer Science with Mathematics) — Score: 81.2%

Projects & Research

- **Real-Time Fake News Detection using Agentic AI:** Built an agentic AI system using LangChain deployed on AWS via GitHub CI/CD pipelines.
- **End-to-End Patient Navigation System (Multi-Agent Healthcare AI):** Developed a patient navigation system with prescription and appointment agents deployed on AWS.
- **Email Assistant – Multi-Agent Inbox Automation System:** Built a LangGraph and DeepAgents assistant over the Gmail and Google Calendar APIs with a Streamlit UI; an orchestrator delegates to four least-privilege subagents (inbox triage, mail search, calendar, draft writer), with human-in-the-loop send approval and prompt-injection flagging.
- **Object Detection using YOLOv11:** Trained a YOLOv11 model using Ultralytics on Roboflow datasets for accurate real-time object detection.

Experience & Achievements

Freelance Generative AI Engineer Nov 2024 – Present
Built and deployed Generative AI and Agentic AI solutions using LangChain, OpenCV, FastAPI, and AWS. Developed and tested a commercial gym attendance system using InsightFace for facial recognition-based member check-in, deployed for real-world commercial use.

Founder & AI Instructor 2024 – Present
Tech Academy (Online AI Learning Platform) — Founded an online AI education startup and deliver hands-on AI, GenAI, and Agentic AI courses.

Winner – AI/ML 24-Hour Hackathon Feb 2025
Bannari Amman Institute of Technology — Secured 1st place for developing a real-time fake news detection system using Agentic AI.

120+ AI Project Streak (2025): Completed and documented 120+ AI projects across Generative AI, Agentic AI, and RAG workflows.

LeetCode 50+ Badge: Achieved the LeetCode 50-day badge, demonstrating consistent practice in data structures and algorithmic problem solving.

MLOps Practice: Used MLflow, DVC, and DagsHub for experiment tracking, dataset versioning, and model versioning across ML projects.

Certifications

- Artificial Intelligence Internship (3 Months) – Pantech.ai *(includes Computer Vision certification track)*
- Complete Data Science Bootcamp – Udemy (Krish Naik)
- Generative AI with Hugging Face – Udemy
